

CLAIMS

1. Heating implement, which comprises

- at least two frame parts which are made out of wood and placed one on top of the other,
- at least one of frame part has at least one groove for leading the combustion air into the structure of the heating implement,
- inside the heating implement one or more spacing pieces have been placed in the groove,
- said spacing pieces can be placed between the frame parts to form an air gap between them, and
- there are one or more holes for the flame, which extend to the groove in at least one of the frame parts.

2. Heating implement in accordance with claim 1, in which

- the spacing piece is rectangular in shape.

3. Heating implement in accordance with claim 1, in which

- the spacing piece is wedge-shaped.

4. Heating implement in accordance with claim 1, in which

- the heating implement comprises an igniting element located in the groove.

5. Heating implement in accordance with claim 1, in which

- the opposing surfaces of the frame parts are nearly straight.

6. Heating implement in accordance with claim 1, in which

- the frame parts are made from solid wood.
